

TRAVELLER MONITORING AND RISK ASSESSMENT

RollCall

RollCall

an online group travel monitoring system

Introducing RollCall by Travel Design Group - an online safety system for group travel monitoring and risk assessment.

In today's environment of heightened world security, the safety and wellbeing of TDG clients/schools/groups and their families are a prime motivator in the development of all TDG's travel policies and procedures.

TDG has partnered with Delta Risk Management to go beyond normal and regular travel agency services regarding travel risk protocols.

RollCall is a revolutionary new online system designed with safety of people as its core business. TDG's partner has harnessed the latest in technology to manage the movements of people on and off most transport modes during commutes while on tour or business.

TDG offers access to modern online systems that monitor group movements, an 'all traveller safe and secure' system; emergency alerts and GPS tracking technology with bus route management programs (which are invaluable for school excursions), tours, sporting events and group travel.

- ✓ An Australian and travel industry-first, innovative security requirement solution
- ✓ GPS tracking that monitors travellers 24/7
- ✓ Revolutionary online system built with the safety of people at its core

NEAR FIELD COMMUNICATION

Captured in real time on Android phones and utilising Near Field Communication (NFC) technology, this is more than a record keeping system.

MAP MOVEMENTS

Using reverse geocoding, RollCall not only displays and records the time of each check on, check off or RollCall event, but also displays the mapped location anywhere in the world.

LIVE ALERTS

This is a dynamic system built with people safety in mind. Live alerts can be sent to those authorised as required, notifying them when and where people have alighted or departed a bus.

PARENT/EMPLOYER PORTAL

Our Parent/Employer Portal provides each with a secure, password protected method of obtaining location and transaction information.

REAL TIME VISIBILITY

Movement data captured on the RollCall device is immediately displayed on devices ie PCs, tablets or mobiles.

EMERGENCY MODE

MAP Emergency services buttons on the software application allow to instantaneously send a copy of the live manifest to emergency services in the case of an incident.

A 24/7 real-time view of who is travelling and where is crucial.

With TDG's decade-long experience, we understand highly specialised security requirements and full duty-of-care, corporate travel needs and budgets. We are continually identifying and building Australian and industry-first, innovative, security requirement solutions that stringently meet an organisation's needs in today's dynamic global market.

This industry-first system focuses on preventative measures to keep travellers, property and your brand safe from accidents and security incidents through four key lines of business which include:

risk management and compliance

supporting the establishment of robust travel policies and procedures, as well as vulnerability assessments

travel security and safety

training to empower individual travellers and tour leaders, including group member safety monitoring and GPS tracking technology

global security intelligence

location specific safety reporting, pre-departure security briefings and on-tour risk advisory updates

child safe compliance

development of strategies, policies and procedures to comply with relevant legislation, especially in relation to children on excursions, exchanges, camps or tours
